

Digital Innovation in Business Project Report

Aaranya Bakehouse Website Project

Student: Himani Gupta | Roll No.: PGON26108 | Course Code: 2106

1. Business Overview

Aaranya Bakehouse is a fictional proposed home-based bakery created to offer fresh, personalised and thoughtfully presented baked products for celebrations and gifting. The business focuses on custom cakes, cupcakes, cookies and dessert boxes, with an enquiry-based ordering model rather than direct online checkout. The website serves as the primary online touchpoint, helping customers discover offerings, understand the custom-order process and submit enquiries.

2. Target Audience

Primary audience: People seeking customised baked products for birthdays, anniversaries, celebrations and gifting. These customers typically value fresh preparation, attractive presentation and the ability to personalise their order.

Secondary audience: Customers planning small gatherings or looking for curated dessert gifts. They need a quick understanding of offerings, easy navigation and a simple enquiry process.

3. Website Structure (Sitemap)

Page	Purpose
Home	Introduce the bakery, showcase product categories and guide visitors to enquiry.
About Us	Share the business story, approach and core values.
Products / Services	Display the four core offerings and explain the custom-order process.
Contact Us	Provide contact details and a validated enquiry form.

Under Products / Services, the website covers: Custom Cakes, Cupcakes, Cookies and Dessert Boxes.

4. Content Strategy

The content strategy is designed to communicate the bakery proposition quickly through concise, customer-focused copy. The Home page builds immediate interest with a hero section and four featured categories. The About Us page establishes trust through story, approach and values. The Products / Services page clearly presents each offering and a simple 3-step custom-order process. The Contact Us page invites enquiries with a validated form and clear contact details. Throughout the site, CTAs guide visitors from awareness to enquiry.

5. POEM Strategy

Paid Media: Targeted social media advertising to promote custom cakes, celebration products and seasonal dessert boxes to relevant local audiences.

Owned Media: The Aaranya Bakehouse website and business social media profiles are used to publish product visuals, service information and clear enquiry CTAs.

Earned Media: Encouraging genuine customer reviews, recommendations, social media mentions and user-shared celebration photos to build authentic credibility.

6. SEO Keywords

The following keywords are incorporated naturally in page titles, meta descriptions, headings and copy: custom cakes, home bakery, custom bakery, celebration cakes, cupcakes, cookies, dessert boxes, personalised cakes, bakery for celebrations, custom dessert boxes. Each page has a unique title and meta description, and internal navigation uses descriptive anchor text.

7. Future Recommendations

Add online ordering if business demand grows and operations allow. Expand customer review content as genuine testimonials become available. Improve local SEO when a permanent service location is established. Use website analytics to understand visitor behaviour and optimise the enquiry journey.

8. Learning Outcomes

Through this project, I learned how to plan a small business website from concept to deployment, apply responsive design principles for desktop and mobile, create a cohesive brand identity, write customer-focused content, implement basic on-page SEO and structure a simple POEM-based digital marketing strategy. The process reinforced the importance of aligning design, content and functionality to a clear business objective.

Acknowledgement: AI-assisted drafting tools were used during content creation. The final document has been reviewed and personalised by the student for academic submission.
